

Technical Assessment Task - Digital Pylot

Position: Web Designer / Web Developer + AI Automation (Remote)

Please review the complete Figma file before starting:

Figma Design:

<https://www.figma.com/design/YZVObhEegXBdtzHYA2u0fk/Task?node-id=0-1&t=NRNpReSifi9zeYfc-1>

The Figma contains **two parts**:

1. Admin Dashboard

Develop the provided dashboard UI into a **functional and dynamic dashboard**.

Requirements:

- Recreate the dashboard design accurately.
- Use dynamic/mock/API data rather than hard-coded UI content.
- Make charts, statistics, tables and relevant filters functional.
- Ensure the dashboard is responsive on mobile also.
- Maintain clean and reusable code.

2. Customer Front-End

The Figma contains a **wireframe for a car-rental website**.

Develop the wireframe into a **modern, polished and responsive website**.

Requirements:

- Follow the overall structure of the wireframe.
- Improve the visual design, UI and user experience.
- Implement the main sections, vehicle cards and rental/search interface.
- Make the website responsive across desktop, tablet and mobile.
- Add appropriate interactions and functionality.

Implementation of AI Feature, Automation & API

As this is an **AI-focused position**, implement **at least one** of the following:

One AI Feature

- AI chatbot/assistant
- AI vehicle recommendation
- AI lead qualification
- AI-powered customer support
- Or another relevant AI feature.

You may build your own API, backend service, webhook system, database integration or automation architecture based on your technical ability.

You are free to choose the technology, framework, architecture and tools you believe are appropriate for completing the task.

Submission

Please provide:

- Live website URL
- GitHub/GitLab repository
- Functional Admin Dashboard
- Functional Customer Front-End
- AI feature demonstration
- Automation workflow
- Short README/documentation

Task Completion Deadline: 48 hours from the date of receiving the task.

Evaluation

We will evaluate:

- UI/UX & Figma implementation - 20%
- Dashboard development & functionality - 20%
- Front-end development & responsiveness - 20%
- AI implementation - 15%
- API & automation - 15%
- Code quality & problem-solving - 10%

What We Are Looking For?

We are not only looking for someone who can just convert a design into code.

We want someone who can **understand a problem, build a solution, use AI effectively, integrate tools and create smarter automated workflows.**
